## **DETAILED ACTION**

### ***Drawings***

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Oath/Declaration***

2. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application-by-application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:  
It was not executed in accordance with either 37 CFR 1.66 or 1.68.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 5-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Cohen (5,438,505).

Cohen discloses an adaptive control method for power converter in Figs. 1-5.

With respect the output voltage of the power converter is regulated by causing the input current of the converter to be proportional to its output current and inversely proportional to its input voltage, Fig. 3 and equations  $I_i = K * V_c$  and

$V_c = I_o / V_o * V_i$ , therefore the input current is proportional to the output current and inversely proportional to input voltage.

With respect, the output current of the power converter is regulated by causing the input current of the converter to be proportional to its output voltage and inversely proportional to its input voltage, Fig. 2 and equations  $P_i = V_i * I_i$ ,  $P_i = K * V_c$  and  $V_c = V_o / V_i$ , therefore the input current is proportional to the output voltage and inversely proportional to the input voltage.

With respect to the regulation of the output voltage of the power converter by causing the input current of the converter to be proportional to its output current, Fig. 3 and equations  $I_i = K * V_c$  and  $V_c = I_o / V_o * V_i$ , therefore the input current is proportional to the output current.

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

***Response to Arguments***

6. Applicant's arguments filed 7/14/05 have been fully considered but they are not persuasive. Applicant argues that claims recite the input current of a power converter responsive to one of the output current or the output voltage, which may be less computationally intensive and consequently, may be more cost effective. Figs. 1-5 and the formula teach regulating the output current or current by controlling an input current or the power converter responsive to one of the outputs current or the output voltage of the power converter. With regard to the superior or cost effectiveness.

In re Fay, 146 USPQ 47 (CCPA 1965). The statutory requirement for patentability are novelty, utility, and unobviousness. Proof that the invention is better or possesses advantages may be persuasive of existence of any or one of more of such requirements

and hence may be indicative of patentability, but Congress did not make such proof a prerequisite to patentability. Hence, applicant may not be required to show superiority over the reference compounds.
